STELLAR

WHEN THE MOONLIGHT DROWNS EVERYTHING,
IT'S THE STARS THAT SHINE THE BRIGHTEST

E-MAGAZINE
ISSUE : 3, OCT'18

STRAIGHT FROM THE HORSE'S MOUTH

Last month being filled with all the glitters and the glimmers, demarking the start of the sparkling upcoming festival of lights. Last month went away in a snap, all our Dipsites had a long break of Dusshera and just before that they had a blast with all those fascinating dresses and lights all over the grounds of Indore. It was such a tiring but exciting month and now we are waiting for the festival of the year, Diwali, aren't we almost there? It is all so brightened up around us, so should our days and also be more energetic and enthusiastic. The Stellar this month is all ready to blast this month and wishes the best for you all.

HOODOO VOODOO

by Adya Mittal and
Eeshita Saxena

We are all aware of the Amritsar Train Accident that took place on Dussehra. The Amritsar train accident left 61 people dead and at least 143 injured after a passing train ploughed through hundreds of revelers who had gathered at the rail tracks at Joda Phatak to watch the burning of Ravan's effigy at the Dussehra event. We were all astounded by the number of people injured and dead. For a second, we could actually hear the cries of those mothers holding their barely alive children, we could feel the tears of those daughters asking their father's limp bodies to wake up. Our heart aches for those who lost somebody there. Neither our tears nor our hearts will be able to reimburse the loss India has faced. Our grievances lie with the lamenting families. But with this being an eye opener, we must spread awareness about safety, importance of life, manpower that we don't lose them the way we did.

MATHS 4 LIFE ?

BY
HARSHDEEP
SINGH

Do any of us realize the importance of maths in our daily life? This is a subject that is applied to every field and profession. Without the application of maths, no field or profession is complete. To help us realize this why don't we imagine a world without maths? Imagine living your days without a watch and a calendar. How would you know the time of the day? Wouldn't you miss your own birthday without a calendar?

Consider this, you go to a shop to buy something, but since this is a world without maths, you don't know what money is, you don't know your measurements. So what do you do?

Whether it is a Zoologist assessing the number of animal species on Earth or a doctor checking your heartbeat, they have to know how to count. Without mathematics an engineer cannot build a bridge. A quantity checker chemist cannot prepare medicines if he cannot accurately measure the quantity of each chemical.

We wouldn't have had markets and businesses without math as the world of trade runs on money. And as a country's development depends heavily on its economic growth, wouldn't that be a problem?

There wouldn't be any more advancements of technology as each sector of technology directly or indirectly employs the application of mathematics. We are all so used to technology of various types that it will be difficult to live in a world without computers, television, mobile phones, and even electricity which is generated in powerhouses using the elements of maths. The subject has such a wide application and even those who have a phobia for it use maths in their daily life. Such is the importance of maths in our life. Probably, without maths, life would have been quite complicated.

Despite the importance of mathematics there are so many people who resist getting to know and understand it. If you have the basic concepts of mathematics right then the subject isn't difficult at all. Maths is not complicated like people believe it to be, it is just their attitude that makes it so.

You were taught addition, subtraction, multiplication and division in your primary classes. Since then, you have been applying these elementary concepts to learn new concepts. Can you solve a question of simple interest, highest common factor, percentage, area, volume, algebra, calculus, trigonometry, etc., without using these concepts? Every topic in maths is based on these basic concepts. It is when the basic elementary concepts are not clear that we fail to apply these concepts to our new taught concepts.

THAT'S LIFE !!!!

"I solemnly swear that I'm up to no good."

A book that touched millions of hearts, including mine, of course I'm talking about J.K. Rowling's amazing creation Harry Potter.

My journey started with the first book in the series and has never stopped since then. I fell in love with idea of an alternate reality, the hexes, the charms, spells and the effect it had on me. After reading the last book it was as if i lost a part of me. But it was not a simple end of my love for the series. I discovered the official Harry Potter site, Pottermore and sorted myself thrice until I got into my favorite house(Slytherin!!).

The thing that I would miss most about the series is the thrill of reading the next book. It is hard to believe that there won't be any more adventures with Ron, Hermoine and Harry or trips to Hogwarts or those amazing feasts. But Harry Potter will be stuck with me till the very end and I will take it to the grave.

WALLPAPER

A creative way of keeping your life organized

Irony-

The Hidden Element *

Life can be aptly described as a collection of little elements that make our lives larger and more meaningful. But these tiny elements are not always in a material form.

The most abstract element of life, works in the background. It is there, but we all fail to see it and acknowledge its existence. The component I am trying to introduce is Irony—a part of our existence that shows the beauty even in duplicity.

Irony is a person, thing or event that advocates two drastically opposite opinions at the same time.

To most of us, it is nothing more than a poetic device to weave beautiful stories and poetry. However, it is much more than that.

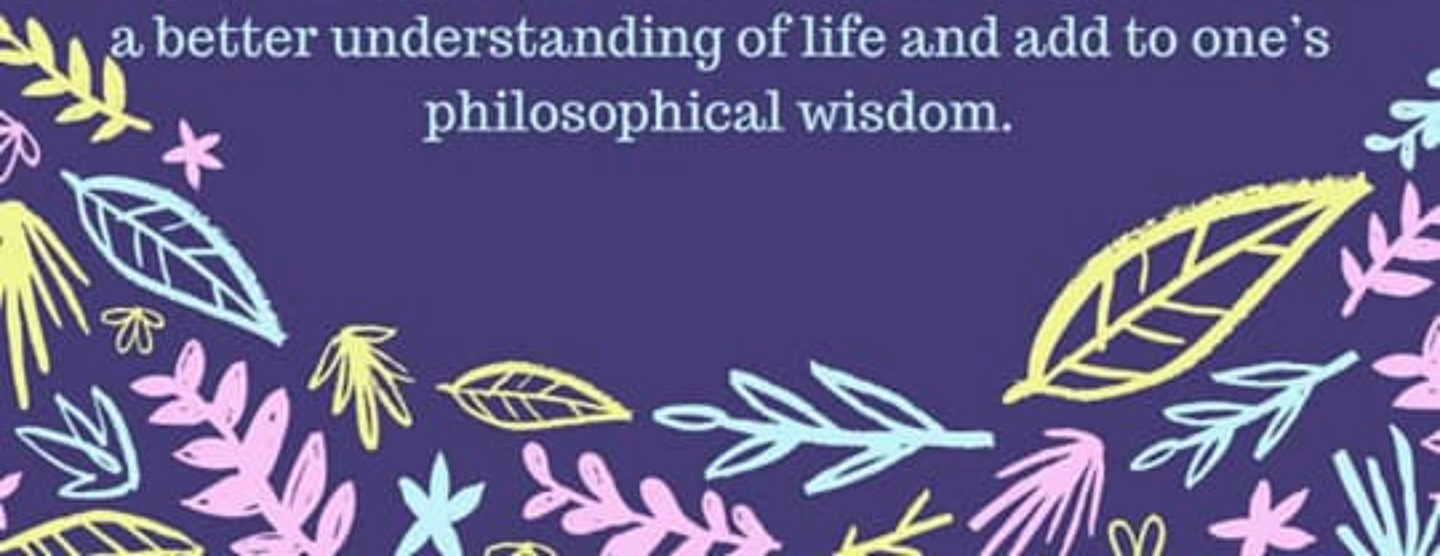

This element of irony resides in our environment and lives, unnoticed. Let us, now, start observing the little ironies that surround us.

The sky spread above the earth, wide and high, is ironical in itself. One moment, it is clear and blue and the other, it becomes a dark black mass sprinkled with stars. But in this change of colours, it shifts from a variety of shades. It shares similarity with the human mind, the abode of far reaching ideas and possibilities, that toggles between a range of colours, representing emotions.

A poet's inspiration arrives in the most ironical ways. One could be standing among heaps of dust, within the dirtiest surrounding but the most beautiful inspiration could strike the poet's mind from that experience.

A young child, slipping his little feet into his father's oversized shoes, seeks to grow up, having an urge to become one among the adults. But when the same child grows into an old man, he misses his carefree childhood and laughs at his little mischiefs in his youth. In all these cases, there is presence of irony.

There are many more ways in which irony finds itself in our lives and surroundings. We just have to look out for the beautiful moments in life when these ironies are in action and cherish them. These little observations in life are sure to make one get a better understanding of life and add to one's philosophical wisdom.

LAUGH OUT LOUD

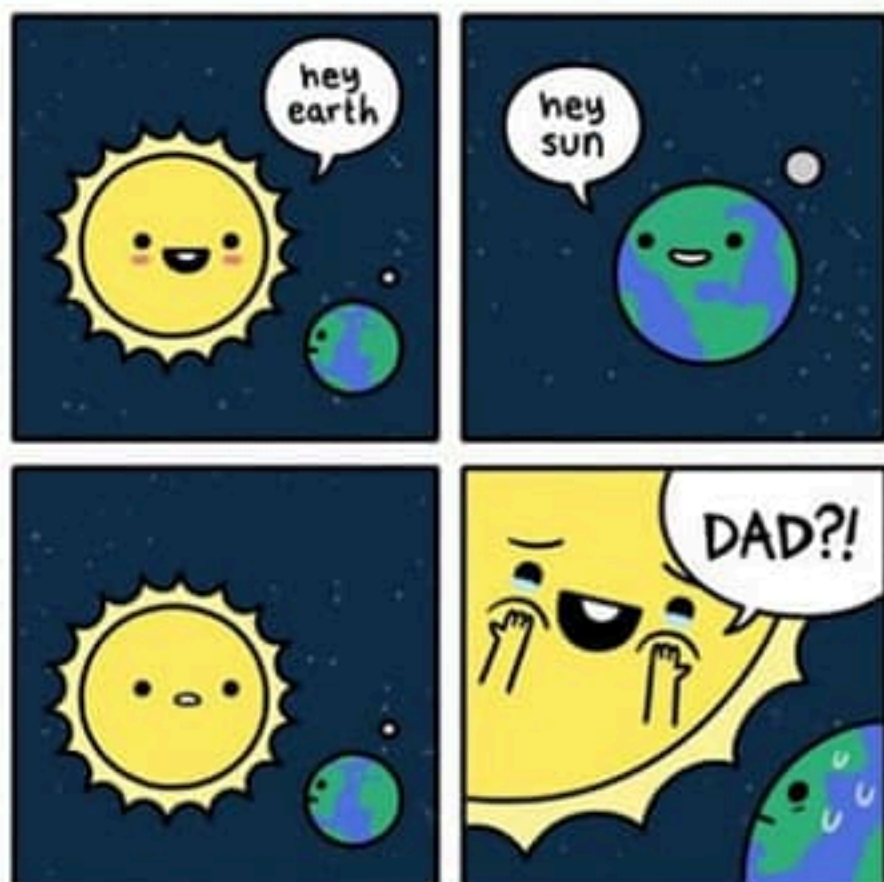

1400 mosquitos like that. 420 mosquitos commented on it. 210 mosquitos shared this.

One mosquito invited for the event. 2800 mosquitos will be attending the event.

My dog used to chase people on a bike a lot. It got so bad, finally I had to take his bike away.

MEME OF MONTH

SISTERS

BLUE FLAKE

**YOU CAN'T LIVE WITH THEM, YOU
CAN'T LIVE WITHOUT THEM**

Raina can't wait to be a big sister. But once Amara is born, things aren't quite how she expected them to be. Amara is cute, but she's also a cranky, grouchy baby, and mostly prefers to play by herself. Their relationship doesn't improve much over the years, but when a baby brother enters the picture and later, when something doesn't seem right between their parents, they realize they must figure out how to get along. They are sisters, after all, so will genuine coin facing reveal a world of laughter, adventure and curiosity before you? check yourself!!
